

FORENSIC ENGINEERING

A Workshop for High School Students

Wednesday, October 4, 2006

3:30 – 5:30 pm

**Christian Brothers University
Science Center, Room 155**

FORENSIC ENGINEERING is the investigation of accidents, fires, and structural failures to reveal the causes of the event and prevent it from happening again.

Have you ever wondered:

- ▶ How a car accident is reconstructed from skid marks and vehicle appearance?
- ▶ How fires and explosions are investigated?
- ▶ How ballistic information can be used to match a bullet with a rifle or pistol?

Learn the answers to these questions from CBU Engineering faculty by attending this workshop. This program is **free of charge** for students in grades 9-12. Advance registration is required.

Registration Deadline: Friday, September 29

To Register: Register online at <http://www.cbu.edu/Prospective/forensics.html>

For more information: Contact us at engineering@cbu.edu or (901) 321-3405.
